Education

The University of Manchester (2018-2019)

MSc Advanced Computer Science (Distinction)

- Areas of study: machine learning, computer vision, parallel computing and text mining.
- Helped improve various aspects of the course and guided students in academic-related issues as a student representative.
- Dissertation: Spiking Grid Cell Models on Neuromorphic Hardware.

The University of Malta (2015-2018)

BSc (Hons) Information Technology (Software Development) (2:1)

- Faculty of ICT student representative and subcommittee member of the ICT Students Association.
- Dissertation: A Tool for Constructing and Visualising Bidirectional Scattering Distribution Functions.

Experience

BIOS (Nov 2019 - Mar 2020)

Graduate Machine Learning Engineer

- BIOS is developing a full-stack neural interface platform, that uses AI to decode and encode the signals from the brain to the body, to treat chronic health conditions.
- Explored peripheral nerve recording simulation using Python, NEURON & Docker.

Anadrom (Sep 2017 - Dec 2018)

Side project: Backend engineer

- Worked on building a community-based eSport coaching platform with a friend.
- Managed hosting & backend development in PHP (Laravel) & MySQL.

Betsson Group (Jul 2017 - Dec 2017)

Software Development Intern

- Investigated and redesigned a legacy system originally written in .NET and Microsoft SQL, using PHP (Laravel), MySQL, HTML, CSS, JavaScript & Docker.
- Improved efficiency and reduced storage requirements by redesigning an unstructured Microsoft SQL database in MySQL.
- Wrote technical and user documentation.

Ricston Ltd (Feb 2016 - June 2017)

Software Engineer Intern

- Completed MuleSoft training for their API and integrations Anypoint Platform.
- Involved in the agile development of an analytical tool to extract information from social media geo-tagged data, maintained using ElasticSearch, Kibana and Logstash.
- Implemented custom OAuth 2.0 system using Java Spring Boot and MySQL.

Technical Skills

Languages: Python, MATLAB, Java, C/C++, C#, PHP, SQL, HTML, CSS, JavaScript.
Frameworks: TensorFlow, Keras, Scikit-Learn, Laravel, Hugo, OpenGL.
Tools: Git, LaTeX, Docker, Azure, AWS, NEURON, ElasticSearch, Blender, Linux/Windows/macOS.

Hackathons & Competitions

- Google Hash Code (2016/17/19)
- Oxford Hack (2018)
- First place among student teams in 'Game of Codes' (2017)
- Runner up in 'The Million Dollar Idea' startup weekend (2016)
- Second place in MITA STEM Game Jam (2016)

Interests

- Machine/Deep/Reinforcement Learning
- Automating everyday tasks
- The Human Brain and Body
- Space Exploration
- Animation
